

WHAT WOULD YOU DO IF YOUR PET WAS LOST?

How does microchipping work?

A pet microchip is not a GPS Tracking Device. A pet microchip uses a radio frequency known as RFID to transmit an ID number stored on a microchip to the scanning device that reads the pet's unique number and displays it. This ID must be registered to you in our database so you can be reached immediately when your pet's microchip is reported found.

- > **Worldwide I.D. registry**
- > **Proactive nationwide lost pet alert service**
- > **Lifetime pet behavior & training support**

We Provide petkey Registration!

You will receive a phone call & email from petkey confirming your registration.

Step 1: Identification

Be sure your pet is microchipped and is wearing ID tags at all times.

Step 2: Registration

If your pet's ID is not registered they are not protected. It is important to register your pet's unique microchip number with your contact information so that you can be reached immediately 24 hours a day if your pet is lost or found.

Step 3: Maintenance

Be proactive in your pet's recovery. When your pet is missing every second counts. The moment your pet is lost or stolen an Alert is generated and sent out to your community. Once found, it is important that we are able to contact you right away so be sure to keep your online account updated with your most current contact information and have a backup contact listed as well.
